DR. HERSCHEL'S WEATHER TABLE.

The following Table (ascribed to Dr. Herschel, and revised by Dr. Adam Clarke,) constructed upon philosophical considerations of the attraction of the Sun and Moon, in their several positions respecting the Earth and confirmed by experience of many years actual observation, furnishes the observer, without farther trouble, with the knowledge of what kind of weather there is the greatest probability of succeeding, and that so near the truth, that in very few instances will it be found to fail.

NEW AND FULL MOON.	SUMMER.	WINTER.
If it be New or Full Moon, or the Moon entering into the first or last quarter at 12 noon, or between 12 and 2, } 2 and 4, afternoon 4 and 6, evening 6 and 8, evening 8 and 10 evening 10 and 12, night 12 and 2, morning 2 and 4, do. 4 and 6, do. 6 and 8, do. 8 and 10, do. 10 and 12, noon	Very rainy Changeable Fair Fair, if wind at N. W. Rain if wind at S. or S. W. Do. do. do. Fair Fair Cold, with frequent showers Rain Wind and Rain Changeable Frequent showers	Snow and Rain. Fair and Mild. Fair. Fair & Frosty if wind N or NE Rain or Snow if wind S or S W Do. do. do. Fair and Frosty. Hard frost, unless wind S or SW Snow and Stormy. Do. do. Stormy weather. Cold rain if wind W; Snow if E Cold, with high wind.

Explanation of Weather Table.

It will be seen from the table, 1st. That the nearer the time of the Moon's change, First Quarter, Full, and Last Quarter, is to *Midnight*, the fairer will the weather be during the seven days following; the space for this calculation occupies from ten at night till two next morning.

2.—That the nearer to *Mid-day*, or *Noon*, these phases of the moon happen, the more foul or wet the weather may be expected during the next seven days; the space for this calculation occupies from ten in the forenoon to two in the afternoon. These observations refer principally to summer, though they affect spring and autumn to a considerable extent.

3.—That the Moon's Change, First Quarter, Full, and Last Quarter, happening during six of the afternoon hours, *i. e.* from four to ten, may be followed by fair weather; but this is mostly dependent on the *wind*, as it is noted in the table.

Though the weather is more uncertain in the latter part of autumn, the whole of winter, and the beginning of spring; yet, in the main, the above observations will apply to those periods also.

Explanations of the Calendar Pages.

At the head of the respective pages for each month are given the ordinary tables of the changes and quadratures of the Moon. The 1st and 2nd columns show the mean times of the rising and setting of the Sun. The quantities are only set down to the nearest minute, the uncertainty of the observed times of the rising or setting of heavenly bodies on land, caused by the varying amount of horizontal refraction and the general liability to the intervention of terrestrial objects in such observations, renders a closer approximation unnecessary for ordinary practical purposes. The 3rd column contains the mean times of the rising or setting of the Moon. The quantities are only set down to the nearest minute, for the reasons mentioned above in respect to the Sun.

Letters addressed to Commissioned Officers of the Army, Navy, or Ordnance, or any of the Departments belonging thereto, who shall have removed in the execution of their duty, are forwarded to the place to which the said Officers may have removed, without additional charge on re-direction.

Letters addressed to New Brunswick, Nova Scotia, or Prince Edward's Island, are rated with the uniform rate of 3d. per half-ounce.
